1. Applicant's arguments with respect to claims 1-8, 10-46, 48 and 49 have been considered but are moot in view of the new ground(s) of rejection.

2. Claims 1-8, 10-46, 48 and 49 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. The feature of dividing a data frame into a plurality of frame fragments for data transmission is critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). To be more specific, it is the frame segments of a data frame being transmitted and received (see Figures 3 and 5) in multilink frame relay communication network, and the number of bytes for the fragment being used for calculation of current credit value. None of the claims is directed to this critical and essential subject matter. Therefore, all claims are rejected under 35 U.S.C. 112, first paragraph, for not enabling

3. Claims 1-8, 10-46, 48 and 49 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Dretzka et al. is cited to show the feature of data transmission using message segments and multiple physical links in parallel similar to the claimed invention.

Kanerva et al. '744 and '385 are further cited to show the feature of multi-channel high-speed data transfer utilizing parallel subchannels for channel allocation similar to the background of the claimed invention.
